

Overview of Database Models

BASIC DEFINITIONS:

- **DATA:** KNOWN FACTS THAT CAN BE RECORDED AND HAVE AN IMPLICIT MEANING.
- **TABLE:** A COLLECTION OF DATA ELEMENTS ORGANIZED IN TERMS OF ROWS AND COLUMNS.
- **RECORD/TUPLE:** A SINGLE ENTRY IN A TABLE IS CALLED A RECORD OR A TUPLE.
- **FIELD:** A TABLE CONSISTS OF SEVERAL RECORDS(ROW), EACH RECORD CAN BE BROKEN INTO SEVERAL SMALLER ENTITIES KNOWN AS FIELDS.
- **DATABASE:** A COLLECTION OF RELATED DATA.
- **DATABASE MANAGEMENT SYSTEM (DBMS):** A SOFTWARE PACKAGE/ SYSTEM TO FACILITATE THE CREATION AND MAINTENANCE OF A COMPUTERIZED DATABASE.
- **DATABASE SYSTEM:** THE DBMS SOFTWARE TOGETHER WITH THE DATA ITSELF. SOMETIMES, THE APPLICATIONS ARE ALSO INCLUDED.

Overview of Database Models

DATABASE MODELS:

- DEFINE HOW THE LOGICAL STRUCTURE OF A DATABASE IS MODELED.
- ARE FUNDAMENTAL ENTITIES TO INTRODUCE ABSTRACTION IN A DBMS.
- DEFINE HOW DIFFERENT PARTS OF DATA ARE CONNECTED TO EACH OTHER AND HOW THESE ARE PROCESSED AND STORED INSIDE THE SYSTEM.

Overview of Database Models

TYPES OF DATABASE MODELS:

- HIERARCHICAL MODEL
- NETWORK MODEL
- RELATIONAL MODEL
- OBJECT-ORIENTED MODEL

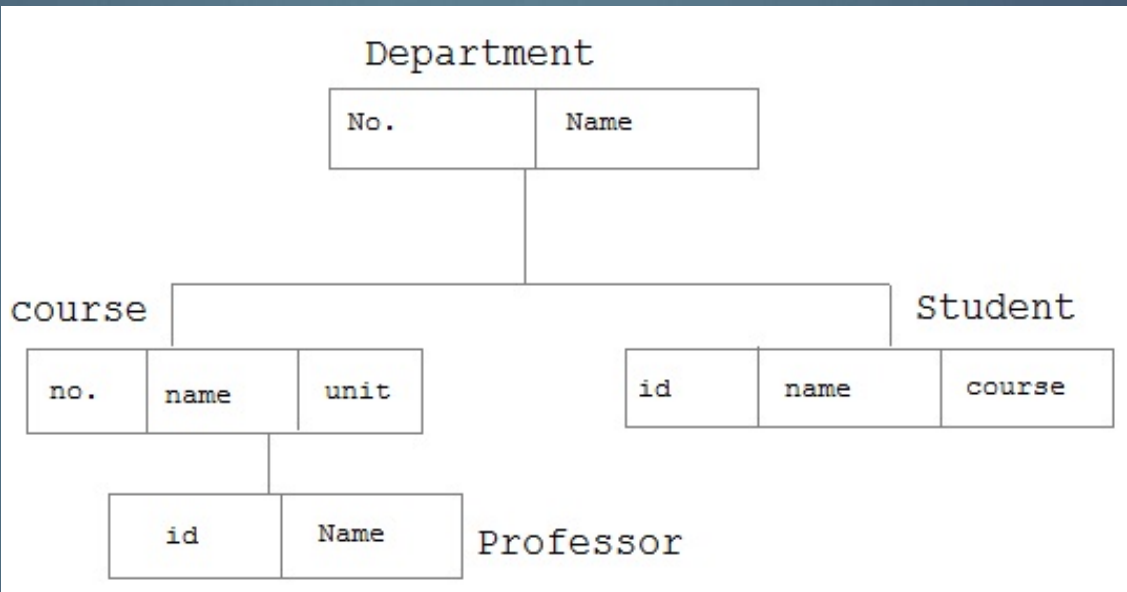

Overview of Database Models (Contd.)

HIERARCHICAL MODEL:

- THE DATA IS ORGANIZED IN A TREE STRUCTURE.
- THERE IS A HIERARCHY OF PARENT AND CHILD DATA SEGMENTS.
- A PARENT CAN HAVE MANY CHILDREN, BUT A CHILD CAN HAVE A SINGLE PARENT.
- THIS STRUCTURE ALLOWS ONE-TO-MANY RELATIONSHIP BETWEEN TWO TYPES OF DATA.

Overview of Database Models (Contd.)

EXAMPLE OF HIERARCHICAL MODEL:

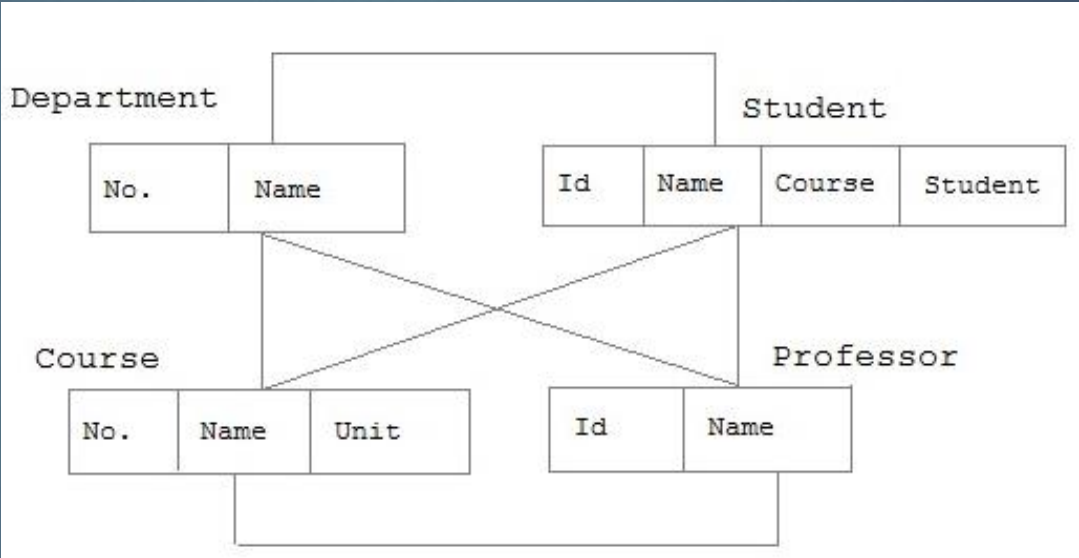

Overview of Database Models (Contd.)

NETWORK MODEL:

- ENTITIES ARE ORGANIZED IN A GRAPH, IN WHICH SOME ENTITIES CAN BE ACCESSED THROUGH SEVERAL PATH.
- A PARENT CAN HAVE MULTIPLE CHILDREN AND A CHILD CAN ALSO HAVE MULTIPLE PARENTS.
- THIS STRUCTURE ALLOWS MANY-TO-MANY RELATIONSHIP BETWEEN TWO TYPES OF DATA.

Overview of Database Models (Contd.)

EXAMPLE OF NETWORK MODEL:

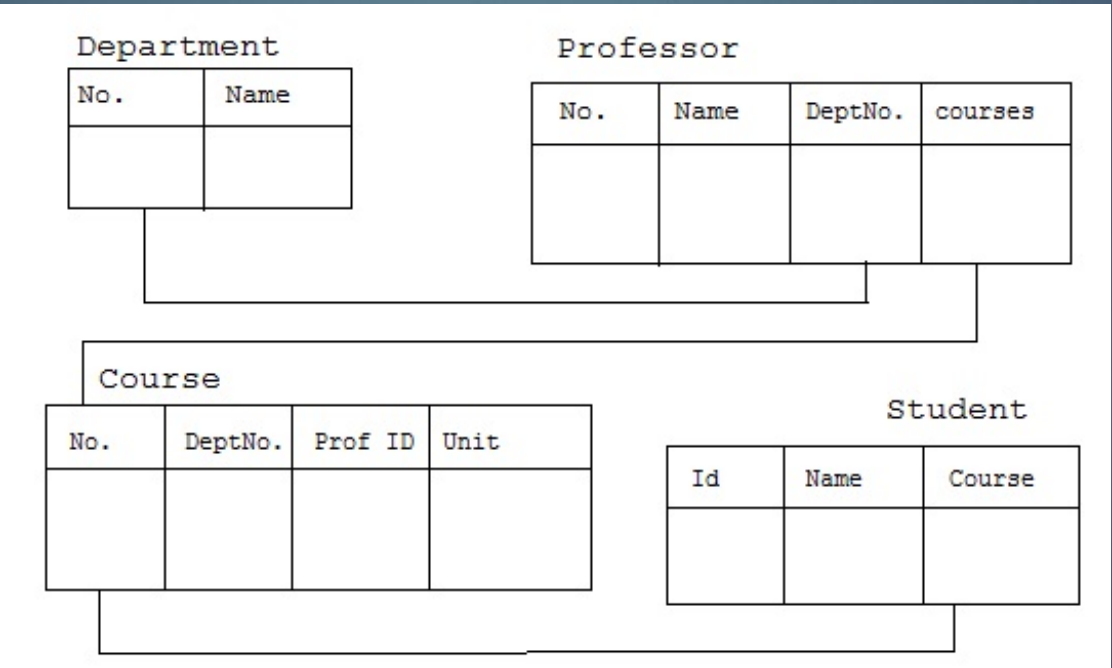

Overview of Database Models (Contd.)

RELATIONAL MODEL:

- ALL DATA IS REPRESENTED IN TERMS OF TUPLES, GROUPED INTO RELATIONS.
- THE TABLES OR RELATIONS ARE RELATED TO EACH OTHER.
- A DATABASE ORGANIZED IN TERMS OF THE RELATIONAL MODEL IS A RELATIONAL DATABASE.
- THE PURPOSE OF THE RELATIONAL MODEL IS TO PROVIDE A DECLARATIVE METHOD FOR SPECIFYING DATA AND QUERIES.

Overview of Database Models (Contd.)

EXAMPLE OF RELATIONAL MODEL:

Overview of Database Models (Contd.)

OBJECT-ORIENTED MODEL:

- BOTH DATA AND THEIR RELATIONSHIP ARE CONTAINED IN A SINGLE STRUCTURE KNOWN AS AN OBJECT.
- AN OBJECT INCLUDES INFORMATION ABOUT RELATIONSHIP BETWEEN THE FACTS WITHIN THE OBJECT, AS WELL AS INFORMATION ABOUT ITS RELATIONSHIP WITH OTHER OBJECTS.
- AN OBJECT IS THE ABSTRACTION OF THE REAL- WORD ENTITY. AN OBJECT REPRESENTS ONLY ONE OCCURRENCE OF ENTITY.
- ATTRIBUTES DESCRIBE THE PROPERTY OF AN OBJECT.
- OBJECTS THAT ARE SIMILAR IN CHARACTERISTICS ARE GROUPED IN CLASS.

Overview of Database Models (Contd.)

EXAMPLE OF OBJECT-ORIENTED MODEL :

Introduction to RDBMS

A RELATIONAL DATABASE MANAGEMENT SYSTEM (RDBMS):

- IS A DATABASE MANAGEMENT SYSTEM BASED ON RELATIONAL MODEL INTRODUCED BY E.F CODD.
- REPRESENTS DATA IN TERMS OF TUPLES(ROWS).
- IS USED TO MANAGE RELATIONAL DATABASE.

RELATIONAL DATABASE:

- IS A COLLECTION OF ORGANIZED SET OF TABLES FROM WHICH DATA CAN BE ACCESSED EASILY.
- CONSISTS OF NUMBER OF TABLES AND EACH TABLE HAS ITS OWN PRIMARY KEY.

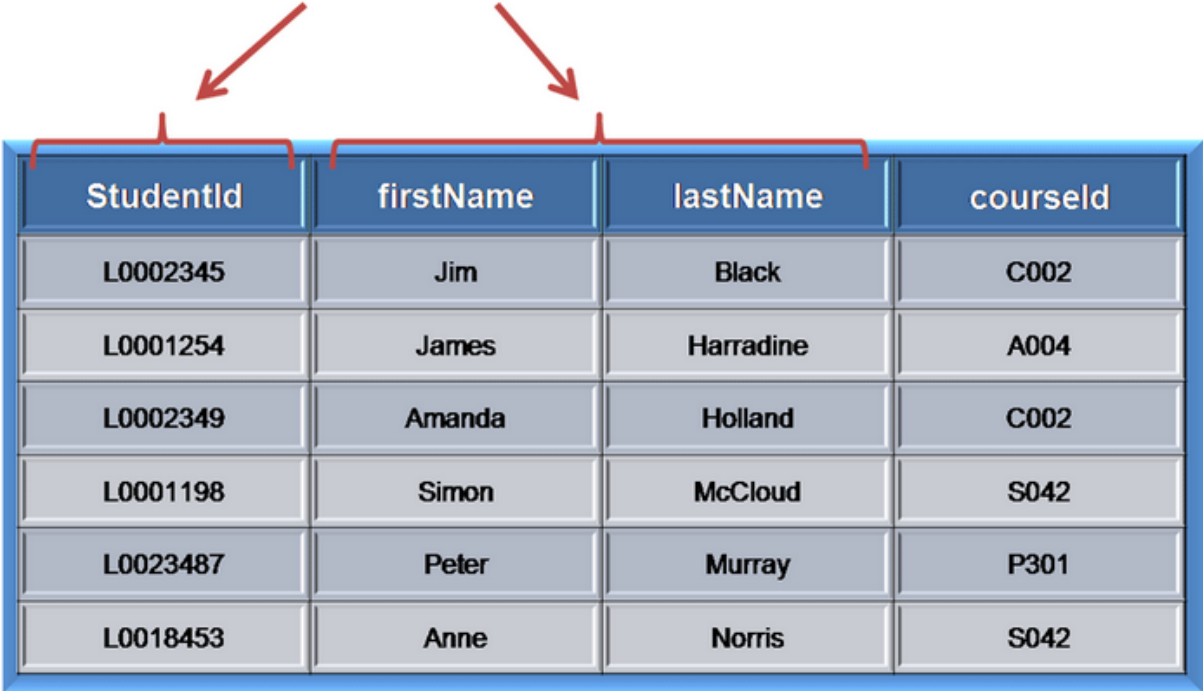

Database Keys

- **SUPER KEY** IS DEFINED AS A SET OF ATTRIBUTES WITHIN A TABLE THAT UNIQUELY IDENTIFIES EACH RECORD WITHIN A TABLE. SUPER KEY IS A SUPerset OF CANDIDATE KEY.
- **A CANDIDATE KEY:**
 - Is a subset of a super key.
 - Is a single field or the least combination of fields that uniquely identifies each record in the table. The least combination of fields distinguishes a candidate key from a super key.
 - Must contain unique values.
 - Must not contain null values.
 - Contains the minimum number of fields to ensure uniqueness.
 - Must uniquely identify each record in the table.

Database Keys

EXAMPLE OF CANDIDATE KEY:

Candidate Keys

StudentId	firstName	lastName	courseId
L0002345	Jim	Black	C002
L0001254	James	Harradine	A004
L0002349	Amanda	Holland	C002
L0001198	Simon	McCloud	S042
L0023487	Peter	Murray	P301
L0018453	Anne	Norris	S042

Database Keys (Contd.)

PRIMARY KEY:

- IS A CANDIDATE KEY THAT IS MOST APPROPRIATE TO BE THE MAIN REFERENCE KEY FOR THE TABLE.
- IS USED THROUGHOUT THE DATABASE TO HELP ESTABLISH RELATIONSHIPS WITH OTHER TABLES.
- MUST CONTAIN UNIQUE VALUES, MUST NEVER BE NULL AND SHOULD UNIQUELY IDENTIFY EACH RECORD IN THE TABLE.

Database Keys (Contd.)

EXAMPLE OF PRIMARY KEY:

Primary Key

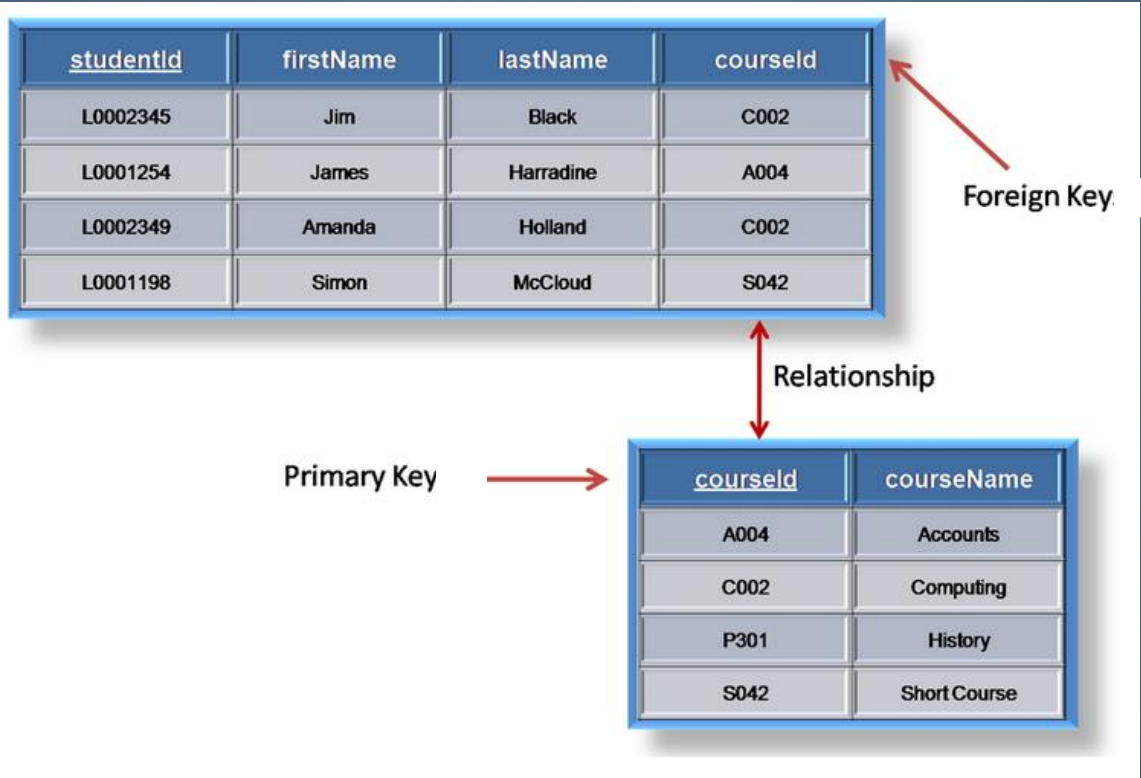

<u>StudentId</u>	firstName	lastName	courseId
L0002345	Jim	Black	C002
L0001254	James	Harradine	A004
L0002349	Amanda	Holland	C002
L0001198	Simon	McCloud	S042
L0023487	Peter	Murray	P301
L0018453	Anne	Norris	S042

Database Keys (Contd.)

- A **FOREIGN KEY** IS GENERALLY A PRIMARY KEY FROM ONE TABLE THAT APPEARS AS A FIELD IN ANOTHER TABLE, WHERE THE FIRST TABLE HAS A RELATIONSHIP TO THE SECOND.
- FOR EXAMPLE, IF WE HAD A TABLE A WITH A PRIMARY KEY X THAT LINKED TO A TABLE B WHERE X WAS A FIELD IN B, THEN X WOULD BE A FOREIGN KEY IN B.

Database Keys (Contd.)

EXAMPLE OF FOREIGN KEY:

Database Keys (Contd.)

- **ALTERNATE KEY** IS ANY CANDIDATE KEY WHICH IS NOT SELECTED TO BE THE PRIMARY KEY.
- **COMPOUND KEY** (ALSO CALLED A COMPOSITE KEY OR CONCATENATED KEY) IS A KEY THAT CONSISTS OF 2 OR MORE ATTRIBUTES.
